Janod Inc.
C/o Todd Reccord
190 Valois Street
Vaudreuil-Dorion, Qc., Canada
J7V 1T4

Subject: Letter of Reference

To Whom It May Concern:

I have worked with Janod Inc. at many locations in New England on Amtrak's North East Corridor in Connecticut and Rhode Island, and on the Harrisburg Line in Pennsylvania. Rock slope stabilization was the work that was performed. This work included scaling, shot-creting, rock bolting, physical track protection from falling debris, and installation of Brugg slope netting. Work was performed with at least one track active with no speed restrictions. Work included sections with the posted speed of 150 MPH. Work was also performed at night when required for track access.

Mr. Todd Reccord was the project manager on several sites. Janod, Inc. and their managers were cognizant of the need for absolute safety while working on the railroad. Their workmanship was always professional and their work was always performed safely.

In closing, it was a pleasure to work with a group of conscientious workers as found at Janod Inc.

Sincerely

Richard E. Kolsch
